Coefficient Of Friction

Because sandpaper on wood has a higher static friction coefficient than wood on wood and aluminum on wood, it will take a greater force to move the sandpaper on wood than for either of the other two sides.

The force required to begin moving the block is equal to: $F_s = \mu_s N = F_a$. $F_s =$ force of static

Coefficient of friction
(COF) is a
dimensionless number
that is defined as the
ratio between friction
force and normal force

Read Online 120 Sandpaper

(Eqn (2.1)). Materials with COF smaller than 0.1 are considered lubricous materials.

COF depends on the nature of the materials and surface roughness.

Usually, ASTM D1894-14 is the most widely used method for COF measurement.
