~~Mitosis results in new cells that are genetically identical to the parent cell. Meiosis results in new cells that are genetically different from the parent cell and are only created for the purpose of sexual reproduction. Mitosis is more common and has a wider variety of functions. Mitosis is a form of cell division in which the nucleus of one cell splits into two and both new nuclei have the same number of chromosomes as the original nucleus.~~

Mitosis and meiosis are nuclear division processes that occur during cell division. Mitosis involves the division of body cells, while meiosis involves the division of sex cells. The division of a cell occurs once in mitosis but twice in meiosis. Two daughter cells are produced after mitosis and cytoplasmic division, while four daughter cells are produced after meiosis.
