These solutions are meant to facilitate the deeper understanding of the book, Topics in Algebra, 2nd edition. We have tried to stick with the notations developed in the book as far as possible. But some notations are extremely ambiguous, so to avoid confusion, we resorted to alternate commonly used notations.

Solutions to TOPICS IN ALGEBRA

Solution: If ajb ; then $b = ka$ for some integer k : If bja , then $a = l'b$ for some integer l' : Hence $b = ka = k'l'b$; then we obtain $b(k'l' - 1) = 0$: This implies $b(1 - k'l') = 0$ so either $b = 0$ or $k'l' = 1$: If $b = 0$; then

14) Suppose a finite set G is closed under associative product and both cancellation laws hold. (G, \cdot) is a group. Since G is finite let $G = \{x_1, x_2, \dots, x_n\}$. Look at $S(x_1) = \{x_1 \cdot x_1, x_1 \cdot x_2, x_1 \cdot x_3, \dots, x_1 \cdot x_n\}$. All these are distinct because of left cancellation law.

Herstein's Topics is the clearest, most naturally motivated exposition of abstract algebra. At any point in the text, the reader can sense the careful development of the whole. The exercises aren't a grad student's hodgepodge or filler that satisfies the publisher's urging to justify the latest edition.

As with most texts on the subject, there are no solutions provided. The tone taken in the work caters to the student who has not had a course in abstract theory and proofs (ie- courses in analysis or topology ; a number theory course, in my experience, is not rigorous enough for the average student supply the necessary background). For more difficult and robust presentations, look towards Artin's "Algebra" or Hungerford's "Algebra" (the latter being part of the Graduate Texts series). For a ...

by a typical course in elementary abstract algebra. Its easy-to-read treatment offers an intuitive approach, featuring informal discussions followed by thematically arranged exercises. This second edition features additional exercises to improve student familiarity with applications. 1990 edition.

About The Book: This book on algebra includes extensive revisions of the material on finite groups and Galois Theory. Further more the book also contains new problems relating to Algebra.

This is the most current textbook in teaching the basic concepts of abstract algebra. The author finds that there are many students who just memorise a theorem without having the ability to

apply it to a given problem. Therefore, this is a hands-on manual, where many typical algebraic problems are provided for students to be able to apply the theorems and to actually practice the methods they have learned. Each chapter begins with a statement of a major result in Group and Ring Theory, followed by problems and solutions. Contents: Tools and Major Results of Groups; Problems in Group Theory; Tools and Major Results of Ring Theory; Problems in Ring Theory; Index.

This book provides a complete abstract algebra course, enabling instructors to select the topics for use in individual classes.
