Aluminum Lithium Alloys Chapter 7

The investigations selected and reviewed in 7.3 General Review of Hot Deformation Characteristics of Al–Li Alloys, 7.4 Hot Deformation and Process Mapping of Al–Li Alloy UL40 are listed in Table 7.6 with the alloys separated into two groups: experimental and near- or fully-commercial alloys. Main aspects of the investigations are indicated, and it is seen that several investigations used Process Mapping, which has greatly increased the systematic knowledge about hot deformation of Al ...

Chapter 7 - Mechanical Working of Aluminum–Lithium Alloys

This chapter provides a brief overview and history of the development of aluminium-lithium alloys from the earlier days of the discovery of age hardening by Alfred Wilm to its current status. It examines the progress of alloy development from simple binary alloys to the complex alloys that are currently used in aerospace systems.

Aluminum-Lithium Alloys | ScienceDirect

Description. Because lithium is the least dense elemental metal, materials scientists and engineers have been working for decades to develop a commercially viable aluminum-lithium (Al-Li) alloy that would be even lighter and stiffer than other aluminum alloys. The first two generations of Al-Li alloys tended to suffer from several problems, including poor ductility and fracture toughness; unreliable properties, fatigue and fracture resistance; and unreliable corrosion resistance.

Aluminium–lithium alloys (Al–Li alloys) are a set of alloys of aluminium and lithium, often also including copper and zirconium. Since lithium is the least dense elemental metal, these alloys are significantly less dense than aluminium. Commercial Al–Li alloys contain up to 2.45% by mass of lithium.

Aluminium–lithium alloy - Wikipedia

Aluminium–Lithium Alloys: Process Metallurgy, Physical Metallurgy, and Welding provides theoretical foundations of the technological processes for melting, casting, forming, heat treatment, and welding of Al–Li alloys. It contains a critical survey of the research in the field and presents data on commercial Al–Li alloys, their phase composition, microstructure, and heat treatment of the ingots, sheets, forgings, and welds of Al–Li alloys.
