"This book argues that certain intellectual creations should not receive copyright or patent protection because they are harmful to society. It posits that the theories of intellectual property and the Intellectual Property Clause of the U.S. Constitution suggest this conclusion. The book responds to counterarguments: namely, that denying protection might increase the output of objectionable works, that other laws should address the moral problems; and that intellectual property functions better under a laissez-faire approach. After responding to these arguments, the book considers the roles of government actors in denying protection. It argues that courts should exercise their powers of equity to deny relief for works that are connected to unlawful acts of the rights-holder, and that courts should exercise their constitutional powers to deny protection for specific categories of harmful expressions and inventions. Next, the book considers whether Congress has constitutional authority to deny protection for works that it considers to be immoral. In concluding that Congress does have such authority, the book sets forth specific criteria that Congress should apply in exercising its moral discretion. Finally, the book considers whether denying intellectual property protection on moral grounds would violate the Free Speech Clause of the First Amendment. It concludes that principles of free speech afford Congress considerable discretion to deny patent protection but only narrow discretion to deny copyright protection. It also concludes that the Free Speech Clause is consistent with judicial denial of protection for the limited categories of works that fall outside the Intellectual Property Clause"--

This book, arising from the collaboration between the IEEM in Macao and the Max Planck Institute in Munich, provides up-to-date information on developments in global intellectual property law and policy and their impact on regional economic and cultural development. The first two parts of the book give broad coverage to the protection of relative newcomers to the field of international intellectual property: cultural heritage and geographical indications. The third part deals with issues of enforcement which have become a major point of interest since the substantive intellectual property rules were put in place. Particular emphasis is given to enforcement systems in Asia, and to the subject matter of criminal enforcement that in many parts of the world is considered an important tool of effective protection. The final part of the book deals with the issue of multiple protection and overprotection, now a growing issue in IP law.

This book examines how intellectual property rights (IPR) affect the daily lives of individuals worldwide and how that may in turn impact the health and wealth of nations. While the protection of the intellectual endeavours of authors and inventors is vital for a fair and just society it is important that the IPR regime remains flexible enough to encourage creativity, innovation and the free flow of information and technology that are critical to the well being of billions of people, especially in the developing world. This work examines the implications of the IPR regime for basic human security. It examines the relationship between IPR regime and fundamental human rights, such as the right to education, health and food, and the broader right to development. This book will be of interest to IP scholars, international relations specialists and international security analysts, in particular those interested in non-traditional security issues. It may also serve as resource book for the international business community on developmental and human rights aspects of IP.
