lead in growing and integrating the dynamic (Java-based/like) Groovy web scripting language and Groovy-based Grails web framework into the most popular and adopted meta framework in Java, the Spring Framework. With these efforts in place, Groovy and Grails are becoming the de-facto Java-based Web scripting language and framework. In addition, the new Griffon framework is available, allowing Java/Groovy developers to build powerful but lightweight “Swing-like” rich client and UI desktop applications. Now, Groovy, Grails, and Griffon have a

on solid open source technologies such as Spring, Hibernate, and SiteMesh, which gives it even more potential in the Java space: Spring provides powerful inversion of control and MVC, Hibernate brings a stable, mature object relational mapping technology with the ability to integrate with legacy systems, and SiteMesh handles flexible layout control and page decoration. Grails complements these with additional features that take advantage of the coding-by-convention paradigm such as dynamic tag libraries, Grails object relational mapping, Groovy

Summary Making Java Groovy is a practical handbook for developers who want to blend Groovy into their day-to-day work with Java. It starts by introducing the key differences between Java and Groovy—and how you can use them to your advantage. Then, it guides you step-by-step through realistic development challenges, from web applications to web services to desktop applications, and shows how Groovy makes them easier to put into production. About this Book You don't need the full force of Java when you're writing a build
