The astonishing novel Brave New World, originally published in 1932, presents Aldous Huxley's vision of the future -- of a world utterly transformed. Through the most efficient scientific and psychological engineering, people are genetically designed to be passive and therefore consistently useful to the ruling class. This powerful work of speculative fiction sheds a blazing critical light on the present and is considered to be Aldous Huxley's most enduring masterpiece. The nonfiction work Brave New World Revisited, first published in 1958, is a fascinating work in which Huxley uses his tremendous knowledge of human relations to compare the modern-day world with his prophetic fantasy envisioned in Brave New World, including the threats to humanity, such as overpopulation, propaganda, and chemical persuasion.

Instead of doing activities related to the usual countries like Mexico or Argentina, students invent their own countries for a brand new planet called "Geos." Ideal for split grade classrooms, the stimulating activities in this unit place an emphasis on creativity and cooperative learning. Students start off by creating their own country: a name and capital city is chosen. Then, students go on to create a map of their country. A range of major project is included from creating a coat of arms to inventing a national sport. Our Social Studies lesson provides a teacher and student section with a variety of activities, evaluation and student examples to create a well-rounded lesson plan.

" Scare headlines about the first human clones appear in our newspapers. Biotech companies brag about manufacturing human embryos as "products" for use in medical treatments. Events are moving so fast—and biotechnology seems so complicated—that many of us worry we can't keep up. But now, Wesley J. Smith provides us with a guide to the brave new world that is no longer a figment of our imagination, but a reality just around the corner of our lives. Smith unravels the mystery of stem cells and shows what's at stake in the controversy over using them for research. He describes the emerging science of human cloning—the most radical technology in history—and shows how it moves forward inexorably against the moral consensus of the world. But at the core of this highly readable and carefully researched book is a report on the gargantuan "Big Biotech" industry and its supporters in the universities and the science and bioethics establishments. Smith reveals how the lure of huge riches, mixed with the ideology of "scientism," threatens to impose on society a "new eugenics" that would dismantle ethical norms and call into question the uniqueness and importance of all human life. "At stake," he warns, "is whether science will continue to serve society, or instead dominate it." In *Consumer's Guide to a Brave New World*, Smith presents a clear-eyed vision of two potential futures. In one, we will use biotechnology as a powerful tool to treat disease and improve the quality of our lives. But in another, darker scenario, we will be steered onto the antihuman path that Aldous Huxley and other prophetic writers warned against half a century ago. "
