For Rob and Charlie this was the start of memorable years driving Massey Ferguson combines the length and breadth of the American wheat belt. This is Rob's story, a vivid account of endless hours of work, rattlesnakes, truck wrecks, summer lightning, tornados, favourite bars and the 'honeys' at the grain elevators. Rob went on to do five years' harvesting with Dale Starks who comes to life in these pages with all his wisdom and cussedness. This is the man who starred in Yellow Trail from Texas, the BBC documentary that first inspired Rob and Charlie to make the trip. In England, Rob was working as an agricultural contractor. For him, machines and harvesting were more than a way of life - they were a passion. This enthusiasm, which brought Rob long-lasting friendships from his American days, illuminates every page of his book.

Author Vizard covers blending the bowls, basic porting procedures, as well as pocket porting, porting the intake runners, and many advanced procedures. Advanced procedures include unshrouding valves and developing the ideal port area and angle.

The Short Shoes tells the tale of a young girl who lives with her grandmother in a faraway land, one that is lush and beautiful. It also describes the ancient Chinese culture of binding girls' feet. Min is a pretty child who lost both her parents, but with her grandmother's help, she seeks the courage to learn of her cultural roots. In the process, Min finds the path that leads to kindness. The girl makes good friends who allow her to see the reflection of their souls, thus letting her find kindness and reach for her dreams. Among the songs, riddles, and poetry Min hears, she discovers new meaning to her existence. She grows into a timeless child in spirit, finding friendship and true love. This timeless children's story was written to show the importance of kindness in our lives.

This open access book focuses on practical clinical problems that are frequently encountered in stroke rehabilitation. Consequences of diseases, e.g. impairments and activity limitations, are addressed in rehabilitation with the overall goal to reduce disability and promote participation. Based on the available best external evidence, clinical pathways are described for stroke rehabilitation bridging the gap between clinical evidence and clinical decision-making. The clinical pathways answer the questions which rehabilitation treatment options are beneficial to overcome specific impairment constellations and activity limitations and are well acceptable to stroke survivors, as well as when and in which settings to provide rehabilitation over the course of recovery post stroke. Each chapter starts with a description of the clinical problem encountered. This is followed by a systematic, but concise review of the evidence (RCTs, systematic reviews and meta-analyses) that is relevant for clinical decision-making, and comments on assessment, therapy (training, technology, medication), and the use of technical aids as appropriate. Based on these summaries, clinical algorithms / pathways are provided and the main clinical-decision situations are portrayed. The book is invaluable for all neurorehabilitation team members, clinicians, nurses, and therapists in neurology, physical medicine and rehabilitation, and related fields. It is a World Federation for NeuroRehabilitation (WFNR) educational initiative, bridging the gap between the rapidly expanding clinical research in stroke rehabilitation and clinical practice across societies and continents. It can be used for both clinical decision-making for individuals and as well as clinical background knowledge for stroke rehabilitation service development initiatives.
