Download Ebook Comprehensive Postanesthesia Care

This book offers a comprehensive, up-to-date overview of optimal postoperative care in patients who have undergone thoracic surgery and discusses challenging issues that are of interest not only in the context of thoracic surgery but also more generally within the fields of anesthesia, intensive care, and pain medicine. The coverage ranges, for example, from use of non-invasive ventilation, extracorporeal membrane oxygenation, and new monitoring devices to fluid management, pain control, and treatment of arrhythmias. A key feature of the book is the exceptionally attractive list of authors, who represent the most authoritative experts on the topics that they address. The approach is appropriately multidisciplinary, acknowledging that in many centers thoracic anesthesiologists are responsible for care during the postoperative period. This book is exceptional in being devoted solely to postoperative care in thoracic

surgery, even though the difficulties involved in thoracic operations sometimes exceed those of cardiac surgery, especially in the postoperative period.

Many patients who present to district (first-referral) level hospitals require surgical treatment for trauma obstetric abdominal or orthopaedic emergencies. Often surgery cannot be safely postponed to allow their transfer to a secondary or tertiary-level hospital but many district hospitals in developing countries have no specialist surgical teams and are staffed by medical nursing and paramedical personnel who perform a wide range of surgical procedures often with inadequate training. the quality of surgical and acute care is

often further constrained by poor facilities inadequate low-technology apparatus and limited supplies of drugs materials and other essentials. the mission of the team responsible for Clinical Procedures in the World Health Organization Department of Essential Health Technologies (EHT) is to promote the quality of clinical care through the identification promotion and standardization of appropriate procedures equipment and materials particularly at district hospital level. WHO/BCT has identified education and training as a particular priority especially for non-specialist practitioners who practise surgery and anaesthesia. It has therefore developed Surgical Care at the District Hospital as a practical resource for individual practitioners and for use in undergraduate and postgraduate programmes in-service training and continuing medical education programmes. the manual is a

patient information transfer." -- from the abstract

Now in its sixth edition, Robert M. Bojar's *Manual of Perioperative Care in Adult Cardiac Surgery* remains the go-to practical guide for all of those involved in the care of the cardiac surgery patient.

Written in outline format, it provides a comprehensive, detailed, and clearly explained review of cardiac surgical disease and perioperative management that is of value to practicing cardiac surgeons as well as to cardiologists, residents, fellows, advanced practice providers, critical care and floor nurses, perfusionists, and medical students. Extensively rewritten with updated references to incorporate the latest concepts, guidelines, protocols, and medications used in cardiac surgical practice, this classic text retains the pragmatic features that have made it the gold standard

Download Ebook Comprehensive Postanesthesia Care

Provides a comprehensive evidence-based guide to the management of the growing population of patients who require perioperative care. *Perioperative Medicine: Medical Consultation and Co-Management* is the first comprehensive reference text developed specifically for hospitalists but envisioned also to help internists, anesthesiologists, allied health professionals, fellows, residents, and medical students manage various aspects of the medical care of the surgical patient. The book features both the preoperative and postoperative medical management of the surgical patient. It focuses on systems, operations, quality of perioperative care, and preoperative assessment of the patient, all in consideration with system-specific risk and evidence-based strategies that minimize risk. It places special emphasis on care of the older hospitalized surgical patient and offers a thorough discussion of post-operative conditions and
