Ctfa Microbiology Guidelines - dev.livaza.com

The first step in microbiological safety testing is to verify that each cosmetic product is free from contamination that could affect the quality of the product or consumer health. The CTFA M-1 method (much like the USP 61 method) will help cosmetic and personal care product producers assure that their products are free from contamination. See suggested microbial limits for more information.

PCPC M-1 Method Summary | Microchem Laboratory

The CTFA Cosmetic Guidelines (Compendium), which is available to members via the web portal provides guidance on regulations, standards and codes of practice for the cosmetic industry. This online guideline additionally provides 9 standards (SABS and NRCS) and tools to optimise member compliance.
