Complications and Emergencies. Introduction. Sedation in dentistry has an excellent safety record. If intravenous (IV), inhalation, intranasal or oral sedation is administered correctly to carefully selected patients, by trained dental clinicians, with appropriate facilities and support, then the incidence of untoward problems should be very low.

A medical emergency can be described as a situation in which a patient's life may be at risk. The medical emergencies that are likely to be encountered in dental practice are shown in Table 16.1. This list is not exhaustive but it represents the commonly accepted conditions for which the dental team should be prepared.
