The social and material production of urban nature has recently emerged as an important area in urban studies, human/environmental interactions and social studies. This has been prompted by the recognition that the material conditions that comprise urban environments are not independent from social, political, and economic processes, or from the cultural construction of what constitutes the 'urban' or the 'natural'. Through both theoretical and empirical analysis, this groundbreaking collection offers an integrated and relational approach to untangling the interconnected processes involved in forming urban landscapes. The essays in this book attest that the re-entry of the ecological agenda into urban theory is vital both in terms of understanding contemporary urbanization processes, and of engaging in a meaningful environmental politics. They debate the central themes of whose nature is, or becomes, urbanized, and the uneven power relations through which this socio-metabolic transformation takes place. Including urban case studies, international research and contributions from prominent urban scholars, this volume will enable students, scholars and researchers of geographical, environmental and urban studies to better understand how interrelated, everyday economic, political and cultural processes form and transform urban environments.

Critical Political Ecology brings political debate to the science of ecology. As political controversies multiply over the science underlying environmental debates, there is an increasing need to understand the relationship between environmental science and politics. In this timely and wide-ranging volume, Tim Forsyth uses an innovative approach to apply political analysis to ecology, and demonstrates how more politicised approaches to science can be used in environmental decision-making. Critical Political Ecology examines: \*how social and political factors frame environmental science, and how science in turn shapes politics \*how new thinking in philosophy and sociology of science can provide fresh insights into the biophysical causes and impacts of environmental problems \*how policy and decision-makers can acknowledge the political influences on science and achieve more effective public participation and governance.

Transformations: A Political Ecology Approach to Society and Nature recognizes that such problems have social, political, and cultural contexts, and that politics, money, and power have physical impacts on nature and society that cannot be ignored. This book brings together a set of chapters that provide an overview of the political ecology approach, illustrating its theoretical underpinnings, central concepts, methods, and major interests. The authors examine the political contexts of a broad range of environmental and social problems, drawing attention to the political and economic forces driving environmental and ecological problems, how societies are transformed as they attempt to cope and adapt to a changing nature, and who pays the price.

This is a topical analysis of ecology movements in contemporary society and the conflicts generated over vital natural resources. The focus is on the social contradictions emerging in India in the wake of these conflicts and the author takes a Third World perspective to discuss the way in which ecology movements have questioned the dominant concepts of economic development.

Urban Political Ecology in the Anthro-obsene: Interruptions and Possibilities centres on how to organize anew the articulation between emancipatory theory and political activism. Across its theoretical and empirical chapters, written by leading scholars from anthropology, geography, urban studies, and political science, the book explores new political possibilities that are opening up in an age marked by proliferating contestations, sharpening socio-ecological inequalities, and planetary processes of urbanization and environmental change. A deepened conversation between urban environmental studies and political theory is mobilized to chart a radically new direction for the field of urban political ecology and cognate disciplines: What could emancipatory politics be about in our time? What does a return of the political under the aegis of equality and freedom signal today in theory and in practice? How do political movements emerge that could re-invent equality and freedom as actually existing socio-ecological practices? The hope is to contribute discussions that can expand and rearrange critical environmental studies to remain relevant in a time of deepening depoliticization and the rise of post-truth politics. Urban Political Ecology in the Anthro-obsene will be of interest to postgraduates,

A provocative essay that imagines a truly ecological future based on political transformation rather than the superficialities of “sustainability.” In this provocative call for a new ecological politics, William Ophuls starts from a radical premise: “sustainability” is impossible. We are on an industrial Titanic, fueled by rapidly depleting stocks of fossil hydrocarbons. Making the deck chairs from recyclable materials and feeding the boilers with biofuels is futile. In the end, the ship is doomed by the laws of thermodynamics and by the implacable biological and geological limits that are already beginning to pinch. Ophuls warns us that we are headed for a postindustrial future that, however technologically sophisticated, will resemble the preindustrial past in many important respects. With *Plato's Revenge*, Ophuls, author of *Ecology and the Politics of Scarcity*, envisions political and social transformations that will lead to a new natural-law politics based on the realities of ecology, physics, and psychology. In a discussion that ranges widely—from ecology to quantum physics to Jungian psychology to

Eastern religion to Western political philosophy—Ophuls argues for an essentially Platonic politics of consciousness dedicated to inner cultivation rather than outward expansion and the pursuit of perpetual growth. We would then achieve a way of life that is materially and institutionally simple but culturally and spiritually rich, one in which humanity flourishes in harmony with nature.
