Certain things, like justice, have impersonal value; other things, like your parents, carry personal value: their value is related to you, and they are, in a sense, good or bad for you. Rønnow-Rasmussen examines the notion of 'good-for', and provides a new analysis of personal value that justifies its inclusion within our classical value taxonomy.

This book will revolutionize the study of criminology throughout the world and promote the discipline especially in the Third World. ... A groundbreaking book ... [offering] dazzling brilliance in the development of criminological theory. Ihekwoaba D. Onwudiwe, Associate Professor, Dept. of Criminal Justice, University of Maryland Eastern Shore "It adopts an insightful theoretical approach to the study of criminology. I find the interdisciplinary approach appealing". Jerry Dibua, Morgan State University This book is about how the history of colonialism has shaped the definition of crime and justice systems not only in former colonies but also in colonialist countries. Biko Agozino argues that criminology in the West was originally tested in the colonies and then brought back to mother countries -- in this way, he claims, the colonial experience has been instrumental in shaping modern criminology in colonial powers. He looks at how radical critiques of mainstream criminology by critical feminist and postmodernist thinkers contribute to an understanding of the relationship between colonial experience and criminology. But he also shows that even critical feminist and postmodernist assessments of conventional criminology do not go far enough as they remain virtually silent on colonial issues. Biko Agozino considers African and other postcolonial literature and contributions to counter colonial criminology, their originality, relevance and limitations. Finally he advocates a "committed objectivity" approach to race-class-gender criminology investigations in order to come to terms with imperialistic and neo-colonialist criminology.

The NATO Advanced Research Institute on Search Theory and Applications was held at the Hotel Algarve in Praia Da Rocha, Portugal, from March 26 through March 30, 1979, and was sponsored by the NATO Special Programme Panel on Systems Science. There were forty-one participants representing a wide range of backgrounds and interests. The purpose of the institute was to bring together people working in search theory and applications with potential users of search techniques to stimulate the increased application of recently developed search technology to civilian problems such as search and rescue, mineral exploration, surveillance, and fishing. Conversely, it was felt that by exposing search analysts to potential applications and new problems, they would be stimulated to develop new techniques for these applications and problems. The exchange of ideas and problems necessary to accomplish these goals was provided in the meeting workshops. There were three workshops, Search and Rescue, Exploration, and Surveillance and Fishing, each consisting of a small group of search analysts and potential users working together to define areas in which search theory and technology can be applied and to outline plans for implementation. At the end of the conference, each working group submitted a report outlining possible areas of search applications and discussing problems which needed to be solved in order to implement these applications.

There are several well-known books on the market that cover biomaterials in a general way, but none provide adequate focus on the future of and potential for actual uses of emerging nanotechnology in this burgeoning field. *Biomaterials: A Nano Approach* is written from a multi-disciplinary point of view that integrates aspects of materials science a

This excellent, innovative reference offers a wealth of useful information and a solid background in the fundamentals of aerodynamics. Fluid mechanics, constant density inviscid flow, singular perturbation problems, viscosity, thin-wing and slender body theories, drag minimalization, and other essentials are addressed in a lively, literate manner and accompanied by diagrams.

comprehensive coverage of both the "how" and "why" of metal failures *Metal Failures* gives engineers the intellectual tools and practical understanding needed to analyze failures from a structural point of view. Its proven methods of examination and analysis enable investigators to:

- * Reach correct, fact-based conclusions on the causes of metal failures
- * Present and defend these conclusions before highly critical bodies
- * Suggest design improvements that may prevent future failures

Analytical methods presented include stress analysis, fracture mechanics, fatigue analysis, corrosion science, and nondestructive testing. Numerous case studies illustrate the application of basic principles of metallurgy and failure analysis to a wide variety of real-world situations. Readers learn how to investigate and analyze failures that involve:

- * Alloys and coatings
- * Brittle and ductile fractures
- * Thermal and residual stresses
- * Creep and fatigue
- * Corrosion, hydrogen embrittlement, and stress-corrosion cracking

This useful professional reference is also an excellent learning tool for senior-level students in mechanical, materials, and civil engineering.

Assembled for the young Prince William of Cleves, Erasmus' *Apophthegmata* consists of thousands of sayings and anecdotes collected from Greek and Latin literature for the moral education of the future ruler. Betty I. Knott and Elaine Fantham's two-volume annotated translation of the aphorisms and Erasmus' commentary on them makes this once popular literary and educational text accessible to modern audiences. The introduction discusses the origins of the *Apophthegmata*, the contents of the collection, and Erasmus' sources. Volumes 37 and 38 of the *Collected Works of Erasmus* series – Two-volume set.

Selection and Use of Engineering Materials, Second Edition covers the substantial development in the selection and application of materials and of associated materials. This book is organized into four parts encompassing 20 chapters that also consider the advances in materials databases and computer programs. The first part deals with the motivation, cost basis, service requirements, failure analysis, specifications, and quality control of engineering materials. The second part describes the mechanical properties of these materials, including static strength, toughness, stiffness, fatigue, creep, and temperature resistance. The third part examines the selection requirements for surface durability, such as corrosion and wear resistance. This part also explores the relationship between materials selection and materials processing, as well as the formalization of selection procedures. The fourth part provides some case studies in materials selection. This book will prove useful to materials scientists and practicing engineers.

Mechanics of Aircraft Structures, Second Edition is the revised update of the original bestselling textbook about aerospace engineering. This book covers the materials and analysis tools used for aircraft structural design and mechanics in the same easy to understand manner. The new edition focuses on three levels of coverage driven by recent advances in industry: the increase in the use of commercial finite element codes require an improved capability in students to formulate the problem and develop a judgement of the accuracy of the numerical results; the focus on fracture mechanics as a tool in studying damage tolerance and durability has made it necessary to introduce students at the undergraduate level to this subject; a new class of materials including advanced composites, are very different from the traditional metallic materials, requiring students and practitioners to understand the advantages the new materials make possible. This new edition will provide more homework problems for each chapter, more examples, and more details in some of the derivations.
