A dictionary of emotions for children ; with 60 definitions to help children identify and understand their emotions. Includes parent/teacher notes.

Complex Event Processing (CEP) is a defined set of tools and techniques for analyzing and controlling the complex series of interrelated events that drive modern distributed information systems. This emerging technology helps IS and IT professionals understand what is happening within the system, quickly identify and solve problems, and more effectively utilize events for enhanced operation, performance, and security. CEP can be applied to a broad spectrum of information system challenges, including business process automation, schedule and control processes, network monitoring and performance prediction, and intrusion detection. "The Power of Events" introduces CEP and shows specifically how this innovative technology can be utilized to enhance the quality of large-scale, distributed enterprise systems. The book describes the challenges faced by today's information systems, explains fundamental CEP concepts, and highlights CEP's role within a complex and evolving contemporary context. After thoroughly introducing the concept, the book moves on to a more detailed, technical explanation of CEP, featuring the Rapide(TM) event pattern language, reactive event pattern rules, event pattern constraints, and event processing agents. It offers practical advice on building CEP-based solutions that solve real world IS/IT problems. Readers will learn about such essential topics as: Managing the open electronic enterprise in the "global event cloud" Process architectures and on-the-fly process evolution Events, timing, causality, and aggregation Event patterns and event abstraction hierarchies Causal event tracking and information gaps Multiple views and hierarchical viewing Dynamic process architectures The Rapide event pattern language Event pattern rules, constraints, and agents Event processing networks (EPNs) Causal models and event pattern maps Implementing event abstraction hierarchies Several comprehensive case studies illustrate the benefits of CEP, as well as key strategies for applying the technology. Examples include the real-time monitoring of events flowing between the business processes of collaborating enterprises, and a hierarchically organized set of event-driven views of a financial trading system. One of the case studies shows how to apply CEP to network viewing and intrusion detection. The book concludes with a look at building an infrastructure for CEP, showing how the technology can provide a significant competitive advantage amidst the myriad of event-driven, Internet-based applications now coming onto the market. 0201727897B05172002

This book presents trends, developments, and examples of how digital disruption is currently reshaping the logistics industry. Logistics is the invisible force behind the global economy, influencing and providing a lens into all economic activities. Chapters written by respected experts in the field describe how new technologies such as autonomous vehicles, blockchain, Internet of things (IoT), and state-of-the-art freight management solutions are fundamentally changing supply chain solutions. Special emphasis is placed on promising start-ups and venture capital firms around the world that are now investing in the future of logistics.

This book is the eighth volume in a series entitled “Contemporary Logistics in China,” authored by researchers from the Logistics Research Center at Nankai University. In the spirit of the seven preceding annual volumes, this book carries on the ideal of providing a systematic exposition on the logistics development in China for the English-speaking community at large. Specially, this volume captures China’s logistics development at a crucial turning point. This present report consists of ten chapters, organized into three sections. The introductory section, consisting of three chapters, depicts the current development status of the logistics market, the logistics facilities and technology, and the regional logistics market. The second section addresses the logistics characteristics of four rapidly expanding industries in China—the third-party logistics, the highway logistics, the express logistics, and the multimodal transport. The final section, consisting of three chapters, discusses some hot logistics topics in China. Chapter 8 studies the capital operation in China’s logistics industry. The next chapter deals with the development of intelligent logistics in China. The last chapter of this section presents the development of regional logistics along the Belt and Road routes. As with the previous volumes, the ultimate aim of this book is to present a timely portrait of the rapid growth of China’s logistics market and the status quo of its logistics industry. In so doing, the book offers an in-depth analysis of critical issues involved in the ongoing dynamic and multi-faceted development, and provides a valuable reference resource for interested readers in the academic and professional fields.

Suppose you were good with words. Suppose when you decided to speak, the message you delivered--and the way you delivered it--successfully connected with your intended audience. What would that mean for your career prospects? What would that mean for your comfort level in social situations? And perhaps most importantly, what would that mean for your satisfaction with the personal relationships you value the most? This book is designed to help you find out. Based on an award-winning course and workshop series at the University of Michigan taken by students training to enter a wide range of fields--law, business, medicine, social work, public policy, design, engineering, and many more--it removes the guesswork from figuring out how to communicate clearly and compellingly. All of us have ideas that are worth sharing. Why not learn how to convey yours in a way that people will appreciate, enjoy, and remember?
