The frog uses the vomerine teeth to stab and secure its prey, while its maxillary teeth are used to crush the food before swallowing. Trace the path of food through the digestive tract. The frog catches its food using its tongue. The food is pulled into the mouth, where it is crushed into smaller bits by the maxillary teeth and swallowed by the pharynx.

Dissection Instructions. 1. Place the frog in the dissecting pan ventral side up. 2. Use scissors to lift the abdominal muscles away from the body cavity. Cut along the midline of the body to the forelimbs. 3. Make transverse (horizontal) cuts near the arms and legs. 4.

Student Guide to the Frog Dissection

SkinThe frog's skin is also a respiratory surface and is covered with mucus so that the skin can absorb oxygen from the water. The mucus also prevents the frog from drying out when it is out of the water and makes it slippery – helping it escape predators. The frog's skin may be covered in spots, called chromatophores.

The Frog: A Virtual dissection--TVO-LC

There is a great virtual frog dissection lab online that is perfect for biology and anatomy students. There are questions within the lab but no way to submit them to the instructor. The following worksheet is a submit-able assignment with the questions from the lab. The answer key is within the prog

Virtual Frog Dissection Worksheets & Teaching Resources | TpT

Frog's tongues are attached to the front of their mouths rather than at the back like humans. When a frog catches an insect it throws its sticky tongue out of its mouth and wraps it around its prey. The frog's tongue then snaps back and throws the food down its throat.
