Genomes 4th Edition

Complete set of DNA contained in an organism is called its genome. The DNA of an organism consists of coding region exons and non-coding region introns. The genome includes every region of the genetic material. Thus the answer that best fit the term genome is option (9); the entirety of an organism ' s hereditary information.

Since genomes are very complex, one research strategy is to reduce the number of genes in a genome to the bare minimum and still have the organism in question survive. There is experimental work being done on minimal genomes for single cell organisms
