What are the various atmospheres or moods that the reading of literary works can trigger? Hans Ulrich Gumbrecht has long argued that the function of literature is not so much to describe, or to re-present, as to make present. Here, he goes one step further, exploring the substance and reality of language as a material component of the world—impalpable hints, tones, and airs that, as much as they may be elusive, are no less matters of actual fact. Reading, we discover, is an experiencing of specific moods and atmospheres, or *Stimmung*. These moods are on a continuum akin to a musical scale. They present themselves as nuances that challenge our powers of discernment and description, as well as language's potential to capture them. Perhaps the best we can do is to point in their direction. Conveying personal encounters with poetry, song, painting, and the novel, this book thus gestures toward the intangible and in the process, constitutes a bold defense of the subjective experience of the arts.

A Handbook of Statistical Analyses Using SPSS clearly describes how to conduct a range of univariate and multivariate statistical analyses using the latest version of the Statistical Package for the Social Sciences, SPSS 11. Each chapter addresses a different type of analytical procedure applied to one or more data sets, primarily from the social and behavioral sciences areas. Each chapter also contains exercises relating to the data sets introduced, providing readers with a means to develop both their SPSS and statistical skills. Model answers to the exercises are also provided. Readers can download all of the data sets from a companion Web site furnished by the authors.

The Volume II is entitled “Neurostimulation and pharmacological approaches”. This volume describes augmentation approaches, where improvements in brain functions are achieved by modulation of brain circuits with electrical or optical stimulation, or pharmacological agents. Activation of brain circuits with electrical currents is a conventional approach that includes such methods as (i) intracortical microstimulation (ICMS), (ii) transcranial direct current stimulation (tDCS), and (iii) transcranial magnetic stimulation (TMS). tDCS and TMS are often regarded as noninvasive methods. Yet, they may induce long-lasting plastic changes in the brain. This is why some authors consider the term “noninvasive” misleading when used to describe these and other techniques, such as stimulation with transcranial lasers. The volume further discusses the potential of neurostimulation as a research tool in the studies of perception, cognition and behavior. Additionally, a notion is expressed that brain augmentation with stimulation cannot be described as a net zero sum proposition, where brain resources are reallocated in such a way that gains in one function are balanced by costs elsewhere. In recent years, optogenetic methods have received an increased attention, and several articles in Volume II cover different aspects of this technique. While new optogenetic methods are being developed, the classical electrical stimulation has already been utilized in many clinically relevant applications, like the vestibular implant and tactile neuroprosthesis that utilizes ICMS. As a peculiar usage of neurostimulation and pharmacological methods, Volume II includes several articles on augmented memory. Memory prostheses are a popular recent development in the stimulation-based BMIs. For example, in a hippocampal memory prosthesis, memory content is extracted from hippocampal activity using a multiple-input, multiple-output non-linear dynamical model. As to the pharmacological approaches to augmenting memory and cognition, the pros and cons of using nootropic drugs are discussed.

The purpose of this guidance document is for the appropriate selection procurement utilization and maintenance of oxygen concentrators. This document also focuses on recommendations for the appropriate use and maintenance of oxygen concentrators in an effort to increase the availability management and quality of oxygen concentrators and ultimately to improve health outcomes in LRS. This document is intended to serve as a resource for the planning and provision of local and national oxygen concentrator systems for use by administrators clinicians and technicians who are interested in improving access to oxygen therapy and reducing global mortality associated with hypoxaemia.

Inspired by a voracious curiosity about humans and other subjects, the poems in Heather Christle's *What Is Amazing* describe and invent worlds in an attempt to understand through participation. The book draws upon the wisdom of foolishness and the logic of glee, while simultaneously exploring the suffering inherent to embodied consciousness. Speakers play out moments of bravado and fear, love and mortality, disappointment and desire. They socialize incorrigibly with lakes, lovers, fire, and readers, reasoning their way to unreasonable conclusions. These poems try to understand how it is that we come to recognize and differentiate objects and beings, how wholly each is attached to its name, and which space reveals them. *What Is Amazing* delights in fully inhabiting its varied forms and voices, singing worlds that often coincide with our own.

This book provides a structured methodology and scientific basis for engineering injection molds. The topics are presented in a top-down manner, beginning with introductory definitions and the big picture before proceeding to layout and detailed design of molds. The book provides very pragmatic analysis with worked examples that can be readily adapted to real-world product design applications. It will help students and practitioners to understand the inner workings of injection molds and encourage them to think outside the box in developing innovative and highly functional mold designs. This new edition has been extensively revised with new content that includes more than 80 new and revised figures and tables, coverage of development strategy, 3D printing, in-mold sensors, and practical worksheets, as well as a completely new chapter on the mold commissioning process, part approval, and mold maintenance.

When historian W. Allen Salisbury first wrote this book in 1978, he was seeking to teach Americans that the battle between the American System of economics and the British System of free trade which resulted in the Civil War, was at the center of the political battles of the 20th century. Today, this is even more true. The heirs of Adam Smith and the British Empire are pressing for worldwide adoption of free trade, a system which led to slavery in the 19th century, and would do so again today. And certain U.S. political circles are even openly demanding a return to the principles and Constitution of the Confederacy. Utilizing a rich selection of primary-source documents, Salisbury reintroduces the forgotten men of the Civil War-era battle for the American System: Mathew Carey, his son and successor Henry Carey, William Kelley, William Elder, and Stephen Colwell. Together with Abraham Lincoln, they demanded industrial-technological progress, against the

ideological subversion of British "free trade" economists and the British-dominated Confederacy. Salisbury highlights the career of Henry C. Carey, who, as Lincoln's leading economic adviser, acted to prevent a complete City of London banker's takeover of the United States political-economic system.
