The Handbook of Research on Teacher Education in the Digital Age focuses on the needs of teachers as they redesign their curricula and lessons to incorporate new technological tools. Including theoretical frameworks, empirical research, and best practices, this book serves as a guide for researchers, educators, and faculty and professional developers of distance learning tools.

Compilations of research on teacher preparation often include no more than a cursory mention of the specific roles and needs of special education teachers. Opening chapters ground the collection in political and economic context, while subsequent sections delve deeply into issues related to the current state of our special education workforce and offer insights into how to best prepare and sustain that workforce. Ultimately, by illuminating the particularities of special education teacher preparation, this landmark handbook addresses the state of current research in the field and sets an agenda for future scholarship.
