With shrinking labor, improving the quality of human capital could be one way to maintain China ' s remarkable growth. The population in rural China accounts for 41% of the total population in China but the human capital development in rural China lags far behind the urban cities. This book selects four major reforms on education and health in rural China and evaluates the impact of these reforms on human capital development. Through rigorous econometric analysis, the book looks at factors of the rural-urban gap in human capital and the causal relationship between the reforms and the human capital development. This book will be a useful reference for developing economies which are facing similar issues in the labor market.

Excerpt from Health Education in Rural Schools The winning of the war has long commanded the attention of the American people. Our resources have been spent lavishly to make secure our liberties and the freedom of the world. Such a supreme crisis in our history revealed inspiring patriotism, but also a pathetic weakness in our citizens. Out of 06 men who were examined on the first draft, a vast army of men were rejected on physical grounds. A large proportion of these physical defects might have been corrected or prevented if the schools had been doing their part to train children to conserve and improve their health. Such a serious flaw in public education must challenge the efforts of educators throughout the land. Several States, realizing the gravity of the situation, have recently passed laws making physical education obligatory and requiring a more extensive and practical teaching of hygiene.' The war has compelled us to recognize, as we never did before, the fundamental importance of health education as preparedness, not only for military service, but also for happy and efficient participation in civil life. Contrary to tradition and popular belief, country children have been found to be as defective physically and in many cases more defective than city children. Comparatively little has been done so far for the health of country children. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. This handbook offers a comprehensive overview of school mental health (SMH) initiatives in rural areas in the United States. It offers clinical and administrative guidelines for innovative and effective programs addressing critical problems among rural youth and in areas where funding and resources are scarce. Chapters cover program development, implementation, sustainability, and evaluation; consider issues of community and policy support; address barriers to access and delivery; and debunk misconceptions about the region and its cultures. Chapters also discuss rural SMH applications relating to special populations, including students with autism, depression, anxiety, bipolar disorder, conduct disorders, and ADHD. In addition, the book examines the potential of school-based programs as a counter to the stigma and distrust of mental health services common to the region. “ /div> Topics featured in the Handbook include: The value of rural SMH from an educator ’ s standpoint. Preventing suicide among students in rural schools. Substance abuse in rural school settings. Bullying and cyberbully among rural youth. Intergenerational patterns of mental illness in rural settings and their relevance for SMH. The importance of involving communities in culturally competent rural interventions.
