International Environmental Law Introduction. International environmental law is a body of international law concerned with protecting the environment, primarily through bilateral and multilateral international agreements. International environmental law developed as a subset of international law in the mid-twentieth century. Although conservation movements developed in many nations in the nineteenth century, these movements typically only addressed environmental concerns within a single nation.

International Environmental Law (IEL) is concerned with the attempt to control pollution and the depletion of natural resources within a framework of sustainable development. It is a branch of public international law - a body of law created by states for states to govern problems that arise between states.

International Environmental Law is one of the most interesting and developing areas of Public International Law. It was only in the 1970s and 80s that states started to understand that the environment requires protection, that oceans should not be polluted, that species are declining. You will learn about the development of environmental law from this point onwards in this course.

This is a list of international environmental agreements. Most of the following agreements are legally binding for countries that have formally ratified them. Some, such as the Kyoto Protocol, differentiate between types of countries and each nation's respective responsibilities under the agreement. Several hundred international environmental agreements exist but most link only a limited number of countries. These bilateral or sometimes trilateral agreements are only binding for the countries th

Many areas of international environmental law remain underdeveloped. Although international agreements have helped to make the laws and regulations applicable to some types of environmentally harmful activity more or less consistent in different countries, those applicable to other such activities can differ in dramatic ways.

International Environmental Law offers a concise, conceptually clear, and legally rigorous introduction to contemporary international environmental law and practice. The book covers all major environmental agreements, paying particular attention to their underlying structure, main legal provisions, and practical operation. It blends legal and policy analysis, making extensive reference to the jurisprudence and scholarship, and addressing the interconnections with other areas of international law, including human rights, humanitarian law, trade and foreign investment. The material is structured into four sections - foundations, substantive regulation, implementation, and influence on other areas of international law - which help the reader to navigate the different areas of international environmental law. Each chapter includes charts summarising the main components of the relevant legal frameworks and provides a detailed bibliography. Suitable for practicing and academic international lawyers who want an accessible, up-to-date introduction to contemporary international environmental law, as well as non-lawyers seeking a concise and clear understanding of the subject.

The Routledge Handbook of International Environmental Law is an advanced level reference guide which provides a comprehensive and contemporary overview of the corpus of international environmental law (IEL). The Handbook features specially commissioned papers by leading experts in the field of international environmental law, drawn from a range of both developed and developing countries in order to put forward a truly global approach to the subject. Furthermore, it addresses emerging and cross-cutting issues of critical importance for the years ahead. The book is split into six parts for ease of reference: The Legal Framework, Theories and Principles of International Environmental Law - focuses on the origins, theory, principles and development of the discipline; Implementing International Environmental Law - addresses the implementation of IEL and the role of various actors and institutions, including corporations, intergovernmental organisations and NGOs; Key Issues and Legal Frameworks - brings fresh perspectives of the common general issues of international environmental law, such as biological diversity and marine environmental law; Regional Environmental Law - explores the specific regimes developed to address regional environmental issues, considering the evolution, prospects and relationship of regional law and mechanisms to IEL; Cross-Cutting Issues - considers the engagement of international environmental law with other key fields and legal regimes, including international trade, human rights and armed conflict; Contemporary and Future Challenges - analyses pressing current and emerging issues in the field including environmental refugees and climate change, REDD and deforestation, and 'treaty congestion' in IEL. This up-to-date and authoritative book makes it an essential reference work for students, scholars and practitioners working in the field.

The unprecedented degradation of the planet's vital ecosystems is among the most pressing issues confronting the international community. Despite the proliferation of legal instruments to combat environmental problems, conflicts between rich and poor nations (the North-South divide) have compromised international environmental law, leading to deadlocks in environmental treaty negotiations and noncompliance with existing agreements. This volume examines both the historical origins of the North-South divide in European colonialism as well as its contemporary manifestations in a range of issues including food justice, energy justice, indigenous rights, trade, investment, extractive industries, human rights, land grabs, hazardous waste, and climate change. Born out of the recognition that global inequality and profligate consumerism present threats to a sustainable planet, this book makes a unique contribution to international environmental law by emphasizing the priorities and perspectives of the global South.

Situating the global poverty divide as an outgrowth of European imperialism, this book investigates current global divisions on environmental policy.

Frontiers in International Environmental Law is a collection of essays that showcases how law and legal scholarship can responded to challenges to our oceans and climate governance regimes.

Introduction to International Environmental Law provides a concise overview of international environmental law and the relations and agreements among nations to facilitate environmental protection. Beginning by exploring the history nature and sources of international environmental law, Professor Koivurova moves on to consider the key principles as well as examining the implementation and effectiveness of international environmental law in practice. It considers how international environmental law has developed away from other branches of international law which are heavily based on state sovereignty, in order to more effectively facilitate environmental protection and concludes by posing questions about the future of the field. Taking a concise, accessible approach throughout and employing case studies drawn from a global range of examples, this book is the ideal first point of entry to the context, principles and issues of this important subject.

Revised edition includes all new developments since 1994, including all international case-law and international legislation.

International environmental law is often closer to home than we know, affecting the food we eat, the products we buy, and even the air we breathe. Drawing on more than two decades of experience as a government negotiator, consultant, and academic, Daniel Bodansky brings a real-world perspective on the processes by which international environmental law develops, and influences the behavior of state and non-state actors.

This book explores how compliance with international environmental law has changed over time, offering a critical analysis of its current shifting patterns. Beginning with an overview of compliance with international environmental law, the book goes on to explore in detail: compliance in the different legal regimes instituted by Multilateral Environmental Agreements (MEAs), the addition of new subjects of international law, the legal relations between developed and developing countries, and the emergence of new compliance mechanisms in global environmental law. The analysis takes two key developments into consideration: the evolution in forms of compliance and non-state involvement in compliance with international environmental law. In the final section, three case studies are provided to demonstrate how these changes have occurred in selected areas: climate change, biodiversity and water resources. Throughout the book, topics are illustrated with extracts from specific international environmental law jurisprudence and relevant international environmental law instruments. In doing so, the book offers a comprehensive analysis of compliance with international environmental law, providing original insights and following a clear and systematic structure supported by reference to the sources. This book will be of interest to professionals, academics and students working in the field of compliance with international environmental law.
