Twenty years ago, environment and sustainable development issues were marginal concerns for businesses and public bodies, requiring a relatively narrow range of personnel, knowledge and skills. Today, these issues are key operational concerns for all but the smallest organizations and apply to all sectors - the private, public and voluntary sectors. Managing them requires a growing army of environmental professionals to manage them with knowledge of a rapidly developing body of regulatory measures. Environmental Management in Organizations provides the basic resource needed by organizations and the managers they employ on the issues and on the management tools, performance measures and communication strategies available. Leading experts on each topic have provided focused explanations and clear practical guidance, as well as setting out the context and the key environmental and management drivers.

In order to meet the recommendations, requirements and specifications of ISO 9001:2000, organisations must undertake an audit of their own quality procedures and those of their suppliers. Likewise, when supplying ISO 9001:2000 accredited customers, suppliers must be prepared to undergo a similar audit. Revised, updated and expanded, ISO 9001:2000 Audit Procedures describes the methods for completing management reviews and quality audits, and outlines the experiences of working with 9001:2000 since its launch in 2000. It also includes essential new material on process models, generic processes, the requirements for mandatory documented procedures, and detailed coverage of auditors questionnaires.
