Though Kant is best known for his strictly philosophical works in the 1780s, many of his early publications in particular were devoted to what we would call 'natural science'. Kant's Universal Natural History and Theory of the Heavens (1755) made a significant advance in cosmology, and he was also instrumental in establishing the newly emerging discipline of physical geography, lecturing on it for almost his entire career.

Summary. Kant's aim in the essay Universal Natural History and Theory of the Heavens shows that the main elements of the entire observable universe, laying bare the basic structure that governs the universe. Kant does this in a preparatory section and three parts. In the preface, he is primarily interested in explaining why the view he wants to defend not only represents no threat to religious orthodoxy.

Kant and Natural Science—Philosophy—Cambridge Core

Kant's Metaphysical Foundations of Natural Science is one of the most difficult but also most important of Kant's works. Published in 1786 between the first (1781) and second (1787) editions of the Critique of Pure Reason, the Metaphysical Foundations occupies a central place in the development of Kant's philosophy, but has so far attracted relatively little attention compared with other works ...

Kant's Construction of Nature—Cambridge Core

Though Kant is best known for his strictly philosophical works in the 1780s, many of his early publications in particular were devoted to what we would call 'natural science'. Kant's Universal Natural History and Theory of the Heavens (1755) made a significant advance in cosmology, and he was also instrumental in establishing the newly emerging discipline of physical geography, lecturing on it for almost his entire career.

TextBook Kant Natural Science The Cambridge Edition Of The Works of Immanuel Kant

In his *Metaphysische Anfangsgründe der Naturwissenschaft*, Kant claims that chemistry is a science, but not a proper science (like physics), because it does not adequately allow for the application of mathematics to its objects. This paper argues that the application of mathematics to a proper science is best thought of as depending upon a coordination between mathematically constructible concepts and those of the science.
