Tucked among the great pioneer destinations on the Oregon Trail is the fertile agricultural area of the Willamette Valley. Today the valley forms the cultural and political heart of Oregon and is home to three-quarters of the state's population. The beginning of the 20th century saw the entrance of Filipinos into the valley, arriving from vegetable farms in California and Washington, fish canneries in Alaska, and from the pineapple and sugar plantations in Hawaii. At the same time, the U.S. territorial government in the Philippines started sponsoring Filipino students, beginning in 1903, to study in the United States. Oregon's two biggest centers of education, today's University of Oregon in Eugene and Oregon State University in Corvallis, became home to Filipinos from the emerging independent Philippine nation. They were mostly male, the children of wealthy Filipinos who had connections. Most of them returned to the Philippines upon graduation; some stayed and created a new life in America.

This edition of Swokowski's text is truly as its name implies: a classic. Groundbreaking in every way when first published, this book is a simple, straightforward, direct calculus text. It's popularity is directly due to its broad use of applications, the easy-to-understand writing style, and the wealth of examples and exercises which reinforce conceptualization of the subject matter. The author wrote this text with three objectives in mind. The first was to make the book more student-oriented by expanding discussions and providing more examples and figures to help clarify concepts. To further aid students, guidelines for solving problems were added in many sections of the text. The second objective was to stress the usefulness of calculus by means of modern applications of derivatives and integrals. The third objective, to make the text as accurate and error-free as possible, was accomplished by a careful examination of the exposition, combined with a thorough checking of each example and exercise.

"Diseases related to inadequate water, sanitation and hygiene are a huge burden in developing countries. It is estimated that 88% of diarrhoeal disease is caused by unsafe water supply, and inadequate sanitation and hygiene (WHO, 2004c). Many schools serve communities that have a high prevalence of diseases related to inadequate water supply, sanitation and hygiene, and where child malnutrition and other underlying health problems are common. Schools, particularly those in rural areas, often completely lack drinking-water and sanitation and handwashing facilities; alternatively, where such facilities do exist they are often inadequate in both quality and quantity. Schools with poor water, sanitation and hygiene conditions, and intense levels of person-to-person contact, are high-risk environments for children and staff, and exacerbate children's particular susceptibility to environmental health hazards. Children's ability to learn may be affected by inadequate water, sanitation and hygiene conditions in several ways. These include helminth infections (which affect hundreds of millions of school-age children), long-term exposure to chemical contaminants in water (e.g. lead and arsenic), diarrhoeal diseases and malaria infections, all of which force many schoolchildren to be absent from school. Poor environmental conditions in the classroom can also make both teaching and learning very difficult. Girls and boys are likely to be affected in different ways by inadequate water, sanitation and hygiene conditions in schools, and this may contribute to unequal learning opportunities. Sometimes, girls and female teachers are more affected than boys because the lack of sanitary facilities means that they cannot attend school during menstruation. The international policy environment increasingly reflects these issues. Providing adequate levels of water supply, sanitation and hygiene in schools is of direct relevance to the United Nations (UN) Millennium Development Goals of achieving universal primary education, promoting gender equality and reducing child mortality. It is also supportive of other goals, especially those on major diseases and infant mortality." - p. iii

In Crime Prevention: Programs, Policies, and Practices, criminologists Steven E. Barkan and Michael Rocque present a well-rounded exploration of evidence-based policies, programs, and practices. Grounded in criminological theory and emphasizing the social, psychological, and biological roots of crime, this text presents current research, perspectives, and examples that capture the key crime prevention concepts students should understand, including the public health model for crime prevention. Highlighting the importance of applying theory to real-world solutions, the authors' discussion of crime prevention strategies integrates theory and practice throughout the text.
