When an AF-P DX NIKKOR 18 – 55mm f/3.5 – 5.6G VR is mounted on the camera, vibration reduction can be enabled or disabled using the Optical VR option in the shooting menu (0 Optical VR). If On is selected, vibration reduction will take effect whenever the shutter-release button is pressed halfway. Vibration reduction reduces blur caused by camera shake, allowing shutter speeds up to 4.0 stops slower than would otherwise be the case, increasing the range of shutter speeds available.

Using Manual Focus Lenses on Nikon DSLR Cameras

In order to manually focus an AF lens on an AF camera, you have to move the AF switch from AF to M. This retracts the screwdriver so it's possible to turn the focus ring freely. Lower end DSLRs such as the D3xxx and D5xxx don't have the focus motor, so on those cameras, AF lenses must always be focussed manually.
