marine urochordate *Styela plicata*, they have been designated as test cells. However, based on their morphological characteristics (including prominent cytoplasmic granules) and mediator content (including heparin, histamine, and neutral proteases), test cells are thought to represent members of the lineage known in vertebrates as mast cells.

Progression of mast cell diseases:
Part 1. Among mast cell patients, we generally assume that a designation of SM means indolent systemic mastocytosis (ISM.) However, in research papers, this term can mean ISM, SSM, ASM or MCL. Advanced SM usually means ASM or MCL.

Mast cells are a major driver in the onset and progression of celiac disease. Celiac.com 05/18/2017 - Researchers understand pretty well that celiac disease is driven in part by an accumulation of immune cells in the duodenal mucosa as a consequence of both adaptive and innate immune responses to undigested gliadin peptides. Mast cells are innate immune cells that produce a majority of co-stimulatory signals and inflammatory mediators in the intestinal mucosa.

RESEARCH. Human pathology studies have provided ample evidence for the presence of a variety of immune and inflammatory cell types in diseased tissue and these studies have been essential in identifying the major cellular players in the progression of disease.

Mast Cells: Pivotal Players in Cardiovascular Diseases

Mast cells (MC) are a bone marrow-derived, long-lived, heterogeneous cellular population that function both as positive and negative regulators of immune responses. They are arguably the most productive chemical factory in the body and influence other cells through both soluble mediators and cell-to-cell interaction.

The significant role of mast cells in cancer

Mastocytosis is a condition where certain immune cells, called mast cells, build up under the skin and/or in the bones, intestines and other organs. This abnormal growth of mast cells causes a range of symptoms, including itchy bumps on the skin, gastrointestinal (GI) issues such as diarrhea, and bone pain.
