Musculoskeletal MRI Structured Evaluation: How to ...

Magnetic resonance imaging is particularly well suited for the medical evaluation of the musculoskeletal (MSK) system including the knee, shoulder, ankle, wrist and elbow. Injuries such as anterior cruciate ligament, meniscus and rotator cuff tears are all easily diagnosed when there is a firm understanding and knowledge of human anatomy. I designed Musculoskeletal MRI specifically with the radiology resident in mind but anyone is welcome to the site.

Musculoskeletal MRI Structured Evaluation: How to ...

The evaluation continues on axial images, where the flexor and extensor tendons should be assessed for tendinosis, tear, and tenosynovitis. The axial plane is also optimal for assessing the volar and dorsal bands of the SL and LT ligaments (findings can be secondarily correlated with coronal images), the neurovascular bundles, carpal tunnel, Guyon canal, as well as the thenar, hypothenar, and interosseous muscles.
