Muse just keeps getting better and better with each album. "Drones" is co-produced by Robert "Mutt" Lange, which I must admit, I had my reservations about. He was a popular music producer in the '80s, but he lost credibility for me later in his career, but thankfully his "studio magic" is back in a big way with "Drones".

It is the first Muse track to feature vocals only, with no instruments or electronic elements. Message-wise, Matthew summarizes his point of the album Drones and the whole album ends with an "Amen". The song is a rearranged version of "Sanctus and Benedictus" by Giovanni Pierluigi da Palestrina, to which Matt added the lyrics.

Includes four pages of 4-color artwork from the album.

Combat drones are transforming attitudes about the use of military force. Military casualties and the costs of conflict sap public support for war and for political and military leaders. Combat drones offer an unprecedented ability to reduce these costs by increasing accuracy, reducing the risks to civilians, and protecting military personnel from harm. These advantages should make drone strikes more popular than operations involving ground troops. Yet many critics believe drone warfare will make political leaders too willing to authorize wars, weakening constraints on the use of force. Because combat drones are relatively new, these arguments have been based on anecdotes, a handful of public opinion polls, or theoretical speculation. Drones and Support for the Use of Force uses experimental research to analyze the effects of combat drones on Americans' support for the use of force. The authors' findings—that drones have had important but nuanced effects on support for the use of force—have implications for democratic control of military action and civil-military relations and provide insight into how the proliferation of military technologies influences foreign policy.

Predators is a riveting introduction to the murky world of Predator and Reaper drones, the CIA's and U.S. military's most effective and controversial killing tools. Brian Glyn Williams combines policy analysis with the human drama of the spies, terrorists, insurgents, and innocent tribal peoples who have been killed in the covert operation—the CIA's largest assassination campaign since the Vietnam War era—being waged in Pakistan's tribal regions via remote control aircraft known as drones, or unmanned aerial vehicles. Having traveled extensively in the Pashtun tribal areas while working for the U.S. military and the CIA, Williams explores in detail of the new technology of airborne assassinations. From miniature Scorpion missiles designed to kill terrorists while avoiding civilian "collateral damage" to prathrais, the cigarette lighter-size homing beacons spies plant on their unsuspecting targets to direct drone missiles to them, the author describes the drone arsenal in full. Evaluating the ethics of targeted killings and drone technology, Williams covers more than a hundred drone strikes, analyzing the number of slain civilians versus the number of terrorists killed to address the claims of antidrone activists. In examining the future of drone warfare, he reveals that the U.S. military is already building more unmanned than manned aerial vehicles. Predators helps us weigh the pros and cons of the drone program so that we can decide whether it is a vital strategic asset, a "frenemy," or a little of both.

Unmanning studies the conditions that create unmanned platforms in the United States through a genealogy of experimental, pilotless planes flown between 1936 and 1992. Characteristics often attributed to the drone—including machine-like control, enmity and remoteness—are achieved by displacements between humans and machines that shape a mediated theater of war. Rather than primarily treating the drone as a result of the war on terror, this book examines contemporary targeted killing through a series of failed experiments to develop unmanned flight in the twentieth century. The human, machine and media parts of drone aircraft are organized to make an ostensibly not human framework for war that disavows its political underpinnings as technological advance. These experiments are tied to histories of global control, cybernetics, racism and colonialism. Drone crashes and failures call attention to the significance of human action in making technopolitics that comes to be opposed to "man" and the paradoxes at their basis.

This volume's contributors offer a new critical language through which to explore and assess the historical, juridical, geopolitical, and cultural dimensions of drone technology and warfare. They show how drones generate particular ways of visualizing the spaces and targets of war while acting as tools to exercise state power. Essays include discussions of the legal justifications of extrajudicial

killings and how US drone strikes in the Horn of Africa impact life on the ground, as well as a personal narrative of a former drone operator. The contributors also explore drone warfare in relation to sovereignty, governance, and social difference; provide accounts of the relationships between drone technologies and modes of perception and mediation; and theorize drones' relation to biopolitics, robotics, automation, and art. Interdisciplinary and timely, *Life in the Age of Drone Warfare* extends the critical study of drones while expanding the public discussion of one of our era's most ubiquitous instruments of war. Contributors. Peter Asaro, Brandon Wayne Bryant, Katherine Chandler, Jordan Crandall, Ricardo Dominguez, Derek Gregory, Inderpal Grewal, Lisa Hajjar, Caren Kaplan, Andrea Miller, Anjali Nath, Jeremy Packer, Lisa Parks, Joshua Reeves, Thomas Stubblefield, Madiha Tahir

In *Biopolitics of the More-Than-Human* Joseph Pugliese examines the concept of the biopolitical through a nonanthropocentric lens, arguing that more-than-human entities—from soil and orchards to animals and water—are actors and agents in their own right with legitimate claims to justice. Examining occupied Palestine, Guantánamo, and sites of US drone strikes in Afghanistan, Pakistan, Somalia, and Yemen, Pugliese challenges notions of human exceptionalism by arguing that more-than-human victims of war and colonialism are entangled with and subject to the same violent biopolitical regimes as humans. He also draws on Indigenous epistemologies that invest more-than-human entities with judicial standing to argue for an ethico-legal framework that will enable the realization of ecological justice. Bringing the more-than-human world into the purview of justice, Pugliese makes visible the ecological effects of human war that would otherwise remain outside the domains of biopolitics and law.

"A collection of essays that focus on Latinx films in the twenty-first century. It looks at film over a wide variety of genres and their historical, political, and cultural contexts, and considers how production techniques depict the Latinx experience. And it discusses non-Latinx filmmakers who complicate and enrich our understanding of the Latinx experience"--
