Pyotr Kapitsa was a leading Soviet physicist who was jointly awarded the Nobel Prize in Physics 1978. Known for his notable contributions to knowledge of atomic
structures and understanding of strong magnetic fields at extremely low temperatures, he also conducted a series of experiments to study liquid helium, leading to
the discovery of its superfluidity.

Permitted to leave the Soviet Union in the early days of the revolution. Kapitsa never gave up his Russian citizenship or engaged in emigre activities during the decade that he worked at Cambridge. Aside from his attractive personality and brilliant capabilities. Kapitsa's role as a symbol of the international confraternity of science is important.
