The Civil War used the advances of the Industrial Revolution to foster great changes in industrial and technological development. Both the North and the South made use of advances in railroad and riverine transportation. The Union, however, was far more advanced technologically than the Confederate states. Consequently, the Union made greater and more effective use of progress in transportation, military medicine, and field artillery than did the Confederacy.

The second Industrial Revolution occurred in the U.S. beginning in the mid-1800s, transforming and positioning America for its rise to a global superpower. Britain's Industrial Revolution saw the emergence of water, steam, and coal as abundant sources of power, helping the U.K. dominate the global textile market during this era. Other advancements in chemistry, manufacturing, and transportation ensured Britain became the world's first modern superpower, and its colonial empire allowed its ...
