PSTricks is only fully compatible with
TeX systems using PostScript
intermediates, including but not limited to
eTeX and others. However, it is not
compatible with the widely used pdfTeX
engine in PDF mode. As pdfTeX is the
default engine in most current
installations, users of PSTricks must either
force pdfTeX to DVI mode or use auto-pst-
pdf.

~~PSTricks — Wikipedia~~

PSTricks allows us to include PostScript
images directly into LaTeX and TeX
documents. Unlike PGF/TikZ, which is a

programming language in itself, PSTricks is a set of macros built over the language PostScript. PSTricks was originally developed by Timothy Van Zandt. High quality vector graphics images can be produced by using PSTricks.

~~Scientific Graphics Visualisation: An Introduction to PSTricks~~

1. Graphics with PSTricks LATEX has only limited drawing capabilities, while PostScript is a page de-scription language which has a rich set of drawing commands; and there are programs (such as dvips) which translate the dvi output to PostScript. So, the natural question is whether one can include PostScript code in a TEX

The PSTricks macros cannot be used with
pdf (La)TeX, because PSTricks uses
PostScript arithmetic, which isn't part of
PDF. There are several more or less good
possibilities to get a PDF output from
PostScript. The absolute easiest way is
using the sequence latex->dvips->ps2pdf.
