Amazon.com: laboratory scales

The ideal cosmetic lab will have three types of scales. Small measurements – This is a scale that can measure things in quantities of 100 g down to 0.001 g. When you are making smaller sized batches you'll need to have accuracy on the lower end. Ingredients like dyes can have a huge impact on the resulting batch so if color is going to be part of your formulating get a good, small sized scale.

It is a small, but yet complete, easy to operate machine, that doesn't alter the flavor of the milk in any way. Raw milk is gently pulled through the machine, is taken up to needed temperature, and when it comes out of the machine it is around 53 degrees. This temperature allows us to cool down to 40-45 immediately and we can begin to bottle.
