Entropy may be given a meaning beyond traditional statistical mechanics. In developing a theory of information around 1948, Claude Shannon was led to a generalized notion of entropy that characterizes the amount of missing information for a given ensemble. In the case of information theory, the ensembles consist of messages, sent in words and sentences. ...

Sethna's book takes this step for statistical mechanics—a field rooted in physics and chemistry whose ideas and methods are now central to information theory, complexity, and modern biology. Aimed at advanced undergraduates and early graduate students in all of these fields, Sethna limits his main presentation to the topics that future mathematicians and biologists, as well as physicists and chemists, will find fascinating and central to their work.
