In 1988, the IEEE established a committee to develop the 802.11
standard.[11.7] All of the 802 standards deal with the data link layer
and physical layer of the OSI reference model. Part 11, or 802.11,
defines all of the specifications for wireless local area networks. The
IEEE 802.11 committee held two wireless LAN workshops before
actually releasing the first version of the standard in 1997. The
purpose of these workshops was to facilitate

First of all, the 802.11 is a set of standards used by IEEE. The most commonly deployed are 802.11a, 802.11b, 802.11g, 802.11n and 802.11ac. These standards can be found in homes and businesses today. Most businesses are using 802.11n and are looking to adopt 802.11ac as it is the fastest and latest available. 802.11a was the most popular standard in 1999 and was the first form of 802.11 technology. It was very fast by 1999 standards and was improved upon by 802.11b and 802.11g.

The 802.11 standards had to address them all. 802.11 First Standard For Wireless LANs. The Institute of Electronic and Electrical Engineers (IEEE) has released IEEE 802.11 in June 1997. The standard defined physical and MAC layers of wireless local area networks (WLANs). The physical layer of the original 802.11 standardized three wireless data exchange techniques: Infrared (IR);

commonly known as Wi-Fi, starting with the creation of the Ethernet in 1973. Wireless technology began developing in the early 1970s and has since become an everyday necessity for both consumer and enterprise. The 802.11 standard, which governs the technology's development, has gone through several facelifts in the 17 years since the specification was first created.

In the late 1990s, one of the first wireless standards was born. You may remember IEEE 802.11b – the first wireless LAN standard to be widely adopted and incorporated into computers and laptops. A few years later came IEEE 802.11g, which offered signal transmission over relatively short distances at speeds of up to 54 Mbps.
