New materialism challenges the mechanistic models characteristic of early modern philosophy that regarded matter as largely passive and inert. Instead it gives weight to topics often overlooked in such accounts: agency, vitalism, complexity, contingency, and self-organization. This collection, which includes an international roster of contributors from philosophy, history, literature, and ...

The New Politics of Experience and The Bitter Herbs by Theodor Itten and Ron Roberts critiques the practices of psychotherapy and psychology and asks searching questions about the neoliberal motives that drive them. Theorising of the human condition too often follows the ideological fashions of the day, which could currently be described as biological/corporate fundamentalism.

From Wikipedia, the free encyclopedia New Politics is a Danish rock band from Copenhagen, formed in 2009. It currently consists of David Boyd, Søren Hansen, and Louis Vecchio. The band's sound has been described as a blend of "punk, pop, and electronically induced dance rock".

Political scientist V. O. Key in 1949 described North Carolina as a "progressive plutocracy." He argued that in the areas of industrial development, public education, and race relations, North Carolina appeared progressive when compared to other southern states. Reconsidering Key's evaluation nearly sixty years later, contributors to this volume find North Carolina losing ground as a progressive leader in the South. The "new politics" of the state involves a combination of new and old: new opportunities and challenges have forced the state to change, but the old culture still remains a powerful force. In the eleven essays collected here, leading scholars of North Carolina politics offer a systematic analysis of North Carolina's politics and policy, placed in the context of its own history as well as the politics and policies of other states. Topics discussed include the evolution of politics and political institutions; the roles of governors, the judicial branch, interest groups, and party systems; and the part played by economic development and environmental policy. Contributors also address how geography affects politics within the state, region, and nation. Designed with students and interested citizens in mind, this collection provides an excellent introduction to contemporary North Carolina politics and government. Contributors: Hunter Bacot, Elon University Christopher A. Cooper, Western Carolina University Thomas F. Eamon, East Carolina University Jack D. Flier, Wake Forest University Dennis O. Grady, Appalachian State University Ferrel Guillory, University of North Carolina at Chapel Hill Sean Hildebrand, Western Carolina University Jonathan Kanipe, Town Manager, Catawba, North Carolina H. Svara, Arizona State University Timothy Vercellotti, Rutgers University

The latest presidential election demonstrated the national importance of the shifting demographics and partisan leanings of the Southern states. When it first appeared in 1998, The New Politics of the Old South broke new ground by examining Southern political trends at the end of the twentieth century. Now in its fourth edition, with all chapters extensively revised and updated to cover events up through the 2008 elections, the authors continue their unique state-by-state analysis of political behavior. Written by the country's leading scholars of Southern politics and designed to be adopted for courses on Southern politics (but accessible to any interested reader), this book traces the shifting trends of the Southern electorate and explains its growing influence on the course of national politics. Book jacket.

This is a masterful-and disturbing-work of political journalism that challenges all of us to wake up and take heed

The New Politics of Old Values provides the first assessment of the vital importance of values in the political process by analyzing Ronald Reagan's intuitive appeal to traditional American values including individualism, freedom, and equality of opportunity. The author was the first to go beyond money and taxes into the now hot topic of values as motivation for the decision-making of voters. He exposes the first approach to an election with a 'strategy of values' as Reagan did in 1980 through this now dominant subject during the presidency of Bill Clinton. He follows the evolution from Reagan's appeal to the underlying liberalism that characterizes the American polity using the words 'family, work, neighborhood, peace, and freedom' to Clinton's repeated emphasis on 'opportunity, community, and responsibility,' capturing how values have reshaped the political maps of the United States bringing the Democratic and Republican parties together on these mandatory issues

The authors of this timely book, *Who Gets What?*, harness the expertise from across the social sciences to show how skyrocketing inequality and social dislocation are fracturing the stable political identities and alliances of the postwar era across advanced democracies. Drawing on extensive evidence from the United States and Europe, with a focus especially on the United States, the authors examine how economics and politics are closely entwined. Chapters demonstrate how the new divisions that separate people and places – and fragment political parties – hinder a fairer distribution of resources and opportunities. They show how employment, education, sex and gender, and race and ethnicity affect the way people experience and interpret inequality and economic anxieties. Populist politics have addressed these emerging insecurities by deepening social and political divisions, rather than promoting broad and inclusive policies.

This book explores the politics of class in Britain over the last 70 years. It shows how changing class sizes have set in train a process that has led to working class people not voting. While differences between the classes in terms of political ideology and identity are unaltered from 50 years ago, the political parties have responded to a shrinking working class by becoming more middle class in terms of policy, rhetoric, and personnel. These political changes have had three main consequences. First, as Labour and the Conservatives became more similar, class differences in party preferences disappeared. Second, new parties, most notably UKIP, have taken working class voters from the mainstream parties. Third, and most importantly, the lack of choice offered by the mainstream parties has led to a huge increase in class based non-voting. Working class people are now much less likely to vote, and this threatens the representativeness of our democracy. They conclude with a discussion of the Brexit referendum and the role that working class alienation played in its historic outcome.

The latest presidential election demonstrated the national importance of the shifting demographics and partisan leanings of the Southern states. When it first appeared in 1998, *The New Politics of the Old South* broke new ground by examining Southern political trends at the end of the twentieth century. Now in its fourth edition, with all chapters extensively revised and updated to cover events up through the 2008 elections, the authors continue their unique state-by-state analysis of political behavior. Written by the country's leading scholars of Southern politics and designed to be adopted for courses on Southern politics (but accessible to any interested reader), this book traces the shifting trends of the Southern electorate and explains its growing influence on the course of national politics.

How science "gets done" in today's world has profound political repercussions, since scientific knowledge, through its technical applications, has become an important source of both economic and military power. The increasing dependence of scientific research on funding from business and the military has made questions about the access to and control of scientific knowledge a central issue in today's politics of science. In *The New Politics of Science*, David Dickson points out that "the scientific community has its own internal power structures, its elites, its hierarchies, its ideologies, its sanctioned norms of social behavior, and its dissenting groups. And the more that science, as a social practice, forms an integral part of the economic structures of the society in which it is imbedded, the more the boundaries and differences between the two dissolve. Groups inside the scientific community, for example, will use groups outside the community—and vice versa—to achieve their own political ends." In this edition, Dickson has included a new preface commenting on the continuing and increasing influence of industrial and defense interests on American scientific research in the 1980s.

Since 2008, energy and food markets—those most fundamental to human existence—have remained in turmoil. Resource scarcity has had a much bigger global impact in recent years than has been predicted, with ongoing volatility a sign that the world is only part-way through navigating a treacherous transition in the way it uses resources. Scarcity, and perceptions of scarcity, increase political risks, while geopolitical turmoil exacerbates shortages and complicates the search for solutions. *The New Politics of Strategic Resources* examines the political dimensions of strategic resource challenges at the domestic and international levels. For better or worse, energy and food markets are shaped by perceptions of national interest and do not behave as traditional market goods. So while markets are an essential part of any response to tighter resource supplies, governments also will play a key role. David Steven, Emily O'Brien, Bruce Jones, and their colleagues discuss what those roles are and what they should be. The architecture for coordinating multilateral responses to these dynamics has fallen short, raising questions about the effective international management of these issues. Politics impede here too, as the major powers must negotiate political and security trade-offs to cooperate on the design of more robust international regimes and mechanisms for resource security and the provision of global public goods. This timely volume includes chapters on major powers (United States, India, China) and key suppliers (Russia, Saudi Arabia). The contributors also address thematic topics, such as the interaction between oil and state fragility; the changing political dynamics of climate change; and the politics of resource subsidies.

Scholars, students, and policymakers will appreciate the volume 's timely overview of the evolution of aging policy.
