with the different biochemical techniques such as spectrophotometry and chromatography to gain knowledge on the biomolecules such as proteins, lipids, carbohydrates, nucleic acids, and their functions.

Biochemical Techniques: Types, Basic methods Notes
What Biochemists and Biophysicists Do. Biochemists and biophysicists study the chemical and physical principles of living things and of biological processes, such as cell development, growth, heredity, and disease.

What does a Biochemist do?

The term biochemistry is synonymous with two

Acces PDF The Tools Of Biochemistry By Terrance G Cooper

somewhat older terms: physiological chemistry and biological chemistry. Those aspects of biochemistry that deal with the chemistry and function of very large molecules (e.g., proteins and nucleic acids) are often grouped under the term molecular biology. Biochemistry is a young science, having been known under that term only since about 1900.
