Accompanys: 9781609136918 .

To successfully complete the transition from being a final year pre-reg nursing student to becoming a qualified staff nurse, students need to understand and practise the responsibilities and roles of the registered nurse. Consequently, they need a textbook which goes further than simply outlining the theory of leadership and management and teamwork and gives more than just 'tips' for being in charge. Nursing: transition to professional practice has been developed as a one-stop-shop for the principles of professional practice and the skills of the qualified nurse. Taking a logical approach, the authors introduce the role of the qualified nurse before explaining what it means to be in charge, how to deliver good care, how to make legal and ethical decisions, and the best ways to work with and teach other staff. Theory is applied to clinical work so readers can easily see the rationale behind daily decisions. Useful for the entire final year, the content is mapped against the transitional module and extremely useful for final year placements as well as providing tips on getting a job and continuing professional development. Written in an easy to read, student friendly manner the authors have brought together trustworthy and reliable advice in a way that is easy to dip into any time you need it- from writing an assignment, devising a nursing plan, documenting your placement learning outcomes, or finding advice on job applications. This book has been truly designed to help student nurses become registered staff and to prepare for practice. Online material - Interactive cases on common scenarios

Casual writing style makes it easier to read the text and gain practical advice.

Now in its Third Edition, this book meets the needs of practical/vocational nurses and nursing faculty, as they work together to smooth the transition from the LPN to the RN role. The text provides

Read Book Transition To Rn Study Guide

interactive student exercises and strategies to "socialize" the LPN nurse/student into an RN program, taking into consideration its philosophy and curricular framework. This Third Edition includes an expanded chapter on communication and a new chapter on the NCLEX®.

"It is very exciting to see all of these studies compiled in one book. It can be read sequentially or just for certain transitions. It also can be used as a template for compilation of other concepts central to nursing and can serve as a resource for further studies in transitions. It is an excellent addition to the nursing literature." Score: 95, 4 Stars. --Doody's "Understanding and recognizing transitions are at the heart of health care reform and this current edition, with its numerous clinical examples and descriptions of nursing interventions, provides important lessons that can and should be incorporated into health policy. It is a brilliant book and an important contribution to nursing theory." Kathleen Dracup, RN, DNSc Dean and Professor, School of Nursing University of California San Francisco Afaf Meleis, the dean of the University of Pennsylvania School of Nursing, presents for the first time in a single volume her original "transitions theory" that integrates middle-range theory to assist nurses in facilitating positive transitions for patients, families, and communities. Nurses are consistently relied on to coach and support patients going through major life transitions, such as illness, recovery, pregnancy, old age, and many more. A collection of over 50 articles published from 1975 through 2007 and five newly commissioned articles, Transitions Theory covers developmental, situational, health and illness, organizational, and therapeutic transitions. Each section includes an introduction written by Dr. Meleis in which she offers her historical and practical perspective on transitions. Many of the articles consider the transitional experiences of ethnically diverse patients, women, the elderly, and other minority populations. Key Topics Discussed: Situational transitions, including discharge and relocation transitions (hospital to home, stroke recovery) and immigration transitions (psychological adaptation and impact of migration on family health) Educational transitions, including professional transitions (from RN to BSN and student to professional) Health and illness transitions, including self-care post heart failure, living with chronic illness, living with early dementia, and accepting palliative care Organization transitions, including role transitions from acute care to collaborative practice, and hospital to community practice Nursing therapeutics models of transition, including role supplementation models and debriefing models
