Air compressors used in medium and heavy duty vehicle air supply systems, such as those found in transport trucks, passenger buses, and the like, generally involve having an air compressor directly driven by the vehicle engine and supplied with inlet air at atmospheric pressure, or, in the case of many transport trucks today, turbocharged air from the engine turbocharger via the engine air intake manifold.

With air brakes, if the air pressure drops and the brakes are in a state that they would not be able to stop the truck, the truck will not be able to move at all until the air pressure has been repaired to the correct level. Transport truck drivers must be able to rely on the braking system in the truck as they are often carrying thousands of pounds of machinery, tools and other equipment and ...
