Vascular Disease: Types, Causes, Treatment,
Prevention

A vascular disease is a disease that involves problems with arteries and veins. Arteries are pipes that bring oxygen-rich blood from the heart to the fingers. Veins are pipes that return the used blood back to the heart and lungs. At the wrist, the radial and ulnar arteries bring blood into the hand.

Vascular Disease | MedlinePlus

Vascular disease is caused by inflammation and weakness of the veins and arteries – and by the build up of fatty deposits in the blood vessels. The accumulation of these deposits happens over a long period of time and can be virtually symptomless until the arteries and veins become so damaged, the blood flow to vital organs and muscles is compromised and causes lack of mobility, pain and tissue death.
