Specific welfare aspects have to be taken into consideration with transgenic animals. They include: the extent of discomfort experienced by the parents during the experimental procedures; the effect of the expression of the transgene (the modified gene inserted) on the created transgenic animal; and the effects on their progeny.

Transgenic technology has been used to produce animals as suitable in vivo systems to study human disease, mammalian gene expression and regulation, as well as finding applications in zootechnology, pharmacology and medicine. The past few years have seen a rapid proliferation in the creation of genetically engineered mice as animal models of human diseases, representing an unique and valuable genetic
