~~UPDATE Version 5.0 11/23/20 Why Dont Spiders Stick To~~

The spider can avoid the sticky spots. Some spider webs, such as those made by funnel-web spiders or sheet weavers, are constructed only of dry silk. A common misconception about spiders is that some kind of natural lubricant or oil on their legs prevents silk from adhering to them. This is entirely false.

~~Why Don't Spiders Get Stuck in Their Webs?~~

To move across its web, a spider scurries across the non-sticky structural silk,

~~Other Everyday ...~~

How do Spiders not stick to their webs? The spider is smart enough to avoid the sticky sections as it moves and it has very minimal contact with the web, in any case. Spiders also constantly groom their legs to keep them clear of silk and glue. Spiders do not have oil-producing glands, nor are their legs coated in any such substance.
