The Evolution of the Immune System: Conservation and Diversification is the first book of its kind that prompts a new perspective when describing and considering the evolution of the immune system. Its unique approach summarizes, updates, and provides new insights on the different immune receptors, soluble factors, and immune cell effectors. Helps the reader gain a modern idea of the evolution of the immune systems in pluricellular organisms Provides a complete overview of the most studied and hot topics in comparative and evolutionary immunology Reflects the organisation of the immune system (cell-based, humoral [innate], humoral [adaptive]) without introducing further and misleading levels of organization Brings concepts and ideas on the evolution of the immune system to a wide readership

Extracellular Matrix and Egg Coats, Volume 130, the latest release in the Current Topics in Developmental Biology series, highlights new advances in the field, with this new volume presenting interesting chapters on The Human Egg's Zona Pellucida, the Structure of Zona Pellucida Module Proteins, The Fish Egg's Zona Pellucidam The Chicken Egg's Zona Pellucidam The Marsupial Egg's Zona Pellucida, the Evolution of Zona Pellucida Proteins, The Mouse Egg's Zona Pellucida, Aspects of ECM, ECM and Morphogenesis, Collagen fibril assembly and function, The Ear's Tectorial Membrane, ECM and Cell Fate, and the Aspects of ECM. Provides the authority and expertise of leading contributors from an international board of authors Presents the latest release in the Current Topics in Developmental Biology series Updated release includes the latest information on the Extracellular Matrix in Development

Americans are having an increasing impact on the rural landscape as development further encroaches in former wilderness areas. This disruptive land use is causing a decline in wildlife and wildlife habitats. *Wildlife and Habitats in Managed Landscapes* presents a new strategy for solving this problem by redefining habitats to include the concept of landscape. Employing this strategy, natural resource managers apply tools of planning, management, and design to entire landscapes to meet the needs of both wildlife and humans.

The *Dissection of Vertebrates* covers several vertebrates commonly used in providing a transitional sequence in morphology. With illustrations on seven vertebrates – lamprey, shark, perch, mudpuppy, frog, cat, pigeon – this is the first book of its kind to include high-quality, digitally rendered illustrations. This book received the Award of Excellence in an Illustrated Medical Book from the Association of Medical Illustrators. It is organized by individual organism to facilitate classroom presentation. This illustrated, full-color primary dissection manual is ideal for use by students or practitioners working with vertebrate anatomy. This book is also recommended for researchers in vertebrate and functional morphology and comparative anatomy. The result of this exceptional work offers the most comprehensive treatment than has ever before been available. \* Received the Award of Excellence in an Illustrated Medical Book from the Association of Medical Illustrators \* Expertly rendered award-winning illustrations accompany the detailed, clear dissection direction \* Organized by individual organism to facilitate classroom presentation \* Offers coverage of a wide range of vertebrates \* Full-color, strong pedagogical aids in a convenient lay-flat presentation
